Brain Recovery – 2026 Update

Brain Recovery: The Receptor-Brain-Disconnect Another Reason Why your Body Doesn't Heal

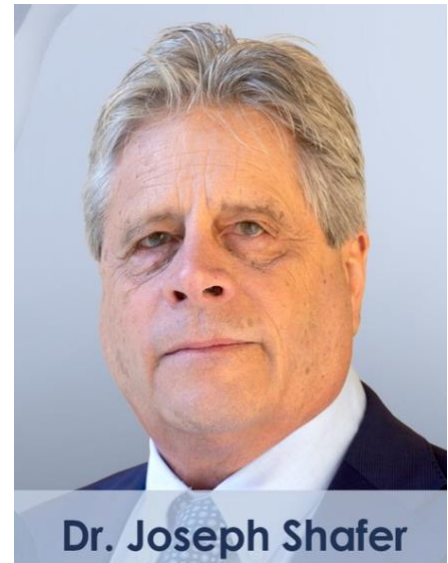

Lecturer: Joe Shafer, DC, DIBAK

Dec. 2026 13th and 14th, (Sun. 8:30-13:00 and 14:00-18:00, Mon. 8:30-13:00 and 14:00-16:00)

Location: [Fortbildung in München \(FiM\)](#), [Bahnhofstraße 16, 85774 Unterföhring](#),

In **survival mode**, which is a limbic state characterized by hypersympathetic tone and its associated physical and emotional disorders there is both: aberrant receptor information from the periphery (intero-, extero- and proprioceptors) and maladaptive processing by the brain, which otherwise has been called "disconnect".

Dr. Joseph Shafer

A novel diagnostic tool, the Baker-Miller-Pink filter has been shown to reliably diagnose survival mode using the diagnostic tools of Applied Kinesiology.

In this new seminar you will get the tools to **detect this keylesion**, which parallels the Injury (IRT) concept in its relevance and offers new intervention tools based on the Brain Recovery Concept. Take part in the novel development based on extensive scientific research. [Read more](#)

This Brain Recovery Master Class will teach:

- **The "Invisible Disconnect":** Identifying the "CEPTION" dysregulation & survival loop rigidity.
- **Differentiate Potential Errors:** Distinguish between "CEPTION" integration failure and central processing error.
- **Resolve Adverse Potentiation:** BR-based neural resets that allow the brain to 'downshift' from a state of threat to a state of safety and healing.

Registration exclusively via the web shop [applied-kinesiology.org](https://www.applied-kinesiology.org)

Seminar fee: 560€
